Amendments to the Abstract:

Please delete the abstract. Please replace the abstract with the following new abstract:

A method of controlling access by at least one user to stored data via a data processing system. The method includes authenticating the user in response to a request from the user to access a set of the stored data that is available to the user. The method also includes, in response to successful authentication, decrypting a user specific table associated with the user. The user specific table identifies the set. The method also includes, in response to successful decryption, accessing the set.
